

### **Summary of the Request MICI-BID-EC-2017-0124**

The Original Request is available only in Spanish; therefore, a summary of the Request in English is presented below:

The Requesters, two residents of Mexico City, alleged that due to the lack of public environmental and social information available on the IDB's portal about the Project, they fear possible unknown impacts on their health as well as to the environment which could be caused by exposure to pollution and hazardous waste transmitted by air and waterways which could be linked to the "Protection and Recovery of Cultural Heritage Assets Program."

On the other hand, the Request elaborates on the different failed attempts made to request information from the IDB regarding this Program and, therefore, urged MICI to provide all public information as per the Access to Information Policy (OP-102). Failing to comply with their information request, according to the Requesters, represented a possible violation from the IDB with its Access to Information Policy (OP-102).

Finally, the Requesters express their wish that MICI could manage their Request through the Consultation and Compliance Review Phase.
