

Summary of Request MICI-BID-BR-2016-0111

Given the confidentiality requirement submitted by the Requesters, a summary of the Request is presented below:

The Request raises concerns regarding the resettlement compensation offered to residents as part of the Project *Tietê Várzea Program (BR-L 1216)* in Guarulhos, São Paulo state, Brazil. According to the Request, the Requesters detail that they have rights before the law to the land being utilized for the Project, and therefore consider the resettlement options involving benefits from government-run social programs to be inadequate and inappropriately categorized. The Requesters claim that these options would cause them undue personal discomfort and economic harm.

In addition, the Request presents information regarding attempts made to resolve this issue directly with the Project's Executing Agency, the *Department of Water and Electric Energy of São Paulo (DAEE)*.

Finally, the Request seeks to pursue both Phases of the MICI process: the Consultation Phase and the Compliance Review Phase.
